START AND STOP WITHOUT KEYS

CoastKey is an innovative keyless ignition system. A personalized PIN code gives you easy access to the start panel. From the panel, you can conveniently start and stop all the engines, no keys necessary! Since CoastKey is modular in design, a FOB can easily be added, which gives you remote start, as well as additional wireless functionality, including a wireless engine kill switch. This gives you, as the captain, freedom of movement and safety by automatically stopping the engines if you fall overboard.

SAVES LIVES

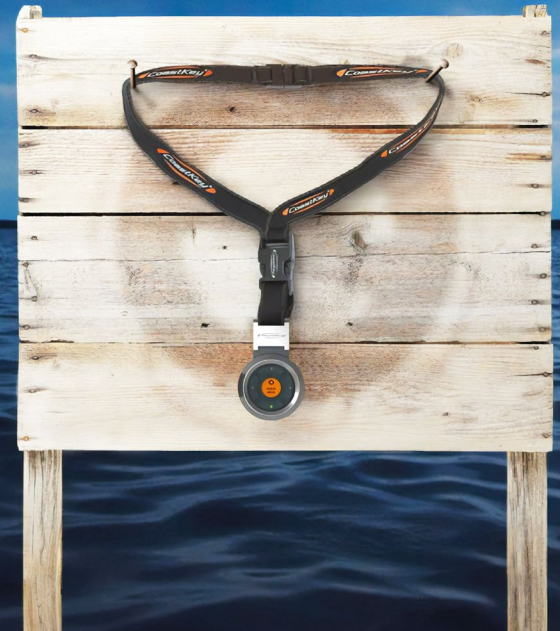

Safety is the most important aspect of boating. If the captain falls overboard, it is imperative that the boat stop immediately. Surveys show that, unfortunately, the traditional lanyard switch is rarely used. The main reason given is that it's too inconvenient to be chained to the console, which limits movement onboard the boat. We believe comfort, freedom and security, all in one product, is the best option!

MADE IN NORWAY

CoastKey was created by a group of experienced Norwegian mariners who have worked continuously since 2005 to improve the comfort and security of boaters. CoastKey is developed and tested to withstand the rough Norwegian sea conditions.

CoastKey, by Nordic Wireless Solutions AS, is headquartered in Norway, with US operations located in Boca Raton, Florida under CoastKey, Inc. CoastKey is a first mover in bringing a keyless ignition system, combined with remote start and a wireless kill switch to the boating industry.

THIS IS COASTKEY

The basic version of CoastKey contains a start panel and an engine control unit. This system allows for a truly keyless ignition which can start up to 4 engines. The start panel replaces the traditional ignition keys and uses a customizable PIN code to start the engines. No keys necessary!

CoastKey can easily be expanded with the addition of a FOB and thus becomes a complete remote start/stop system with a wireless engine cut-off switch. CoastKey can be further expanded to wirelessly control additional functions, such as tilt, anchor windlass, bow thrusters, etc.
